

## 3.6 Evergreen Sequoia Maintenance Notes - August 18, 2021

This maintenance update will keep Sequoia at Evergreen 3.6.4 (the current release) along with some additional bug fixes. Bug fixes that were previously included in prior maintenance updates but that are not yet present in the community release will be retained; this document just lists the new fixes.

### Cataloging

- SRCE Fixed Field Display
  - The SRCE fixed field now displays in the MARC Editor. Previously it was not present in the editor interface.
  - You may need to clear some information from your browser's local storage to view the SRCE field. This can be done in Evergreen by going to:
    - 1. Administration -> Workstation -> Stored Preferences
    - 2. In the In-Browser Prefs tab, delete all keys that start with FFPosTable\_\* and FFValueTable\_\*
    - 3. Check the Hatch Prefs tab and delete the same keys if they are present (they likely will not be in this tab)
  - <https://bugs.launchpad.net/evergreen/+bug/1718782>

### Course Reserves

- Course Section Display
  - Previously, the field for a course section displayed in the catalog search results even if a course did not have a section associated with it. The section field will no longer be displayed if the course does not have a section.
  - <https://bugs.launchpad.net/evergreen/+bug/1913221>
