3.6 Evergreen Sequoia Maintenance Notes - March 16, 2022

This maintenance update will keep Sequoia at Evergreen 3.6.5 (the current release), but adds some additional bug fixes. Bug fixes that were previously included in prior maintenance updates but that are not yet present in the community release will be retained; this document just lists the new fixes.

IMPORTANT NOTE: The tool tip update will be applied to your Evergreen Production system on March 16, 2022 to get this priority update to users sooner.

Staff Catalog - Tooltip Display

- Interface affected: staff catalog bibliographic record page > Items Table
- Change: this patch fixes a display issue that caused the tooltip that appears when you hover your cursor over values in the Item Table grid to block information. The tooltips will no longer display on fields in the Item Table that have an action or link associated with it.

Serials Module - Serials Templates

- Interface affected: serials interfaces that make use of serials item templates, such as the Manage Subscriptions interface and binding interface.
- Change: This patch optimizes how Evergreen loads the serials item templates in these interfaces. End users will now see templates display and update as expected, especially if subscriptions for multiple locations that use different templates are present on the same record.
