

3.6 Evergreen Sequoia Maintenance Notes - May 18, 2022

This maintenance update will keep Sequoia at Evergreen 3.6.5 (the current release), but adds some additional bug fixes. Bug fixes that were previously included in prior maintenance updates but that are not yet present in the community release will be retained; this document just lists the new fixes.

This maintenance update will be applied to your Evergreen Test system on May 18, 2022 to provide time for testing and evaluation. The patches and bug fixes contained in this update will then be applied to your Evergreen Production system during the June 2022 maintenance update.

Cataloging

- Staff can no longer load the Holdings View for the pre-cat record
 - Loading the holdings view for this record has limited utility and if there are enough holdings attached this can cause server issues.

System Improvements

The following system improvements are included but their effect is not directly visible to users:

- SuperCat can crash on bibs that have serial units with stat cats
 - <https://bugs.launchpad.net/evergreen/+bug/1970486>
